

Statistics on teen drivers are sobering:

- Motor vehicle crashes are the leading cause of death for teens
- 16-year-olds have higher crash rates than drivers of any other age, and they're three times more likely to die in a motor vehicle crash than the average of all drivers
- According to the National Traffic Safety Administration (NHTSA), the economic impact of crashes involving 15 – 20 year-olds is over \$40 billion
- Death rates for 16- and 17-year-old drivers increase with each additional passenger

However, education programs do make a difference. Between 1995 and 2005, the fatality rate for teen drivers dropped 6.5 percent.

We want to keep doing better. Therefore, Ed is teaming up with Clark County School District to help our teens become good, conscientious drivers.
